

# Stop the invasion

Protect your  
property or business  
against pests

For a free survey, call Pestfree now on 600 523 330 or visit [pestfreeuae.com](http://pestfreeuae.com)

# Is your business under attack

Properties in the UAE are in constant threat of invasion from unwanted pests such as ants, cockroaches, rodents, mosquitoes, flies and many more.

They are annoying and pose a health threat and safety risk to you and the general public. Failure to protect against pest infestations can result in serious consequences for an organization, its employees and customers.

# Here to serve

At PESTFREE, we provide effective targeted solutions and preventative care for all kinds of pest problems. We work closely with our customers on our pest management programmes. Where possible, we limit the use of pesticides in favour of more eco-friendly pest control methods.

## **PESTFREE Commercial Services**

We offer comprehensive solutions for pest control management to a large number of market segments. We provide comprehensive inspection and service reports each time we attend to your property. Access to these and other account information can be made through our website link.

## **PESTFREE Municipality Contracts**

We support the government in its effort to ensure the health and safety of the general public through targeting pests such as rodents, cockroaches, flies, mosquitoes and ants & crawling insects in public areas.

## **PESTFREE Residential Services**

We offer targeted pest control solutions, both inside and outside the customer's home. Also, we provide recommendations to homeowners and tenants on effective measures to reduce pest problems.

# Eco-Friendly Pest Management

Pestfree is committed to ensuring the impact of the pesticides on the environment is minimal. Our Eco-friendly Pest Management system uses an array of complimentary methods such as mechanical devices, physical devices, genetic, biological and chemical management. Pestfree is committed to ensuring the impact of the pesticides on the environment is minimal.

As a triple ISO certified company, Pestfree observes the Eco-friendly Pest Management strategy as our core philosophy that ensures quality, environmental and occupational health and safety compliance.

The cornerstone of Eco-friendly Pest Management is regular site monitoring. With your help, and Pestfree's professional monitoring, we can help discourage pests from entering your property, thereby minimizing pesticide use.

Here are some strategies which you can adopt to support Pestfree's Eco-friendly Pest Management approach.

## **Cleanliness**

It is important to deny pests any source of food and water. Keep food preparation areas and kitchens clean. Store food products in sealed containers or refrigerators.

## **Restricting entry**

Pests can gain entry through small gaps. It is important that all these gaps are repaired, and any potential entry points are sealed or screened.

## **Outside**

Ensure rubbish is bagged, sealed, and properly placed in garbage bins. Maintain landscaping so it does not become overgrown and eliminate standing water.

# Pestfree Training School

All Pestfree technicians are trained and certified to deliver safe pest control services. We have an in-house training school in Al Ain, which is managed by a full time Technical Training Manager from Australia's leading pest control company, ensuring the training is comprehensive and on par to world's best practice.

The Technicians undertake theoretical and practical tests to ensure their competencies.

The pest control training subjects include:

- Customer service
- Identification of pest types and their breeding cycles
- Applying pesticides to manage pests
- Chemical usage and dilution rates
- Modifying the environment to manage pests
- Maintaining equipment and storage of chemicals
- Installing physical termite barriers
- Occupational Health and safety, including use of personal protection equipment
- Completing a service report

# Specialist Protection

Pests are unsolicited occupants of businesses and properties. They can spread infections, damage stock and buildings, contaminate foodstuffs and goods and transmit diseases across work surfaces.

The damage to your business's reputation, the loss of customers, the loss of profits and the cost of replacing damaged stock, far outweighs the protection that can be provided by Pestfree's specifically tailored pest prevention programs.

Pesticides will always be the last alternative for eliminating pests at Pestfree, however this can only be achieved by applying an integrated approach to pest control and prevention. This is demonstrated by Pestfree through:

- Working with you to change the living environment of pests to make it less likely for the pest to survive.
- Using inspections and monitoring devices to determine where pests are active

- Using only safe and approved pesticides
- Applying pesticides only to those area(s) where pests are active

The key to all successful pest control is proper sanitation and exclusion, along with regular inspections and monitoring of pest activity.

Proactive pest control, therefore, is important, not only because of the vulnerability to pest infestations, but also because of the impact on your business' reputation. Pestfree has been servicing the UAE market since 1992 and offers expertise in the following market segments.

- Food Processing and Storage Facilities
- Healthcare Facilities
- Office Buildings
- Industrial Facilities
- Warehousing Facilities
- Retail Facilities
- Government Facilities

Our service teams are ready to inspect your property and provide a comprehensive report detailing your pest control needs. Call Pestfree now on 600 523 330 to arrange your inspection.
